1. Introduction

This handbook is designed as a reference for students, educators, and healthcare enthusiasts. It covers human anatomy, common diseases, diagnostic tools, and emergency care protocols.

The purpose of this extended edition is to provide additional examples, expanded descriptions, and practical scenarios to enhance understanding.

2. Basic Anatomy & Systems Overview

Cardiovascular System: Responsible for circulation of blood, delivering oxygen and nutrients, removing waste.

Respiratory System: Responsible for oxygen and carbon dioxide exchange.

Nervous System: Includes the brain, spinal cord, and nerves.

Digestive System: Breaks down food into nutrients.

3. Common Conditions

Hypertension: High blood pressure, often symptomless but dangerous.

Diabetes Mellitus: Chronic high blood sugar condition.

Asthma: Airways inflammation causing breathing difficulty.

Ischemic Heart Disease: Narrowed heart arteries causing reduced blood flow.

4. Diagnostics and Tests

Diagnostics involve history-taking, examination, and tests.

Common tests include blood work, imaging (X-ray, CT, MRI), ECG, and spirometry.

Diagnosis often requires a combination of patient history, physical signs, and investigation results.

5. Emergency Protocols & First Aid

CPR: 30 compressions and 2 breaths if trained.

Control bleeding with pressure or tourniquet.

Cool burns with running water for 10–20 minutes.

Immobilize fractures.

6. Treatment Principles

Treatment depends on disease type and severity.

Options include medication, surgery, therapy, and lifestyle changes.

Prognosis varies depending on early detection and proper management.

7. Patient Education & Preventive Care

Balanced diet, regular exercise, vaccinations, regular checkups.

Quit smoking and limit alcohol.

Understand personal health risks.

8. Public Health and Epidemiology

Public health focuses on community well-being.

Epidemiology studies disease spread and prevention.

Programs include vaccination drives and sanitation improvement.

9. Glossary of Medical Terms

Diagnosis: The process of identifying a disease from symptoms and tests.

Prognosis: The likely outcome of a disease.

Treatment: Medical care given to a patient for an illness or injury.

Prevention: Actions to stop disease from occurring.
